Description

Auray LED6-USB 6-LED Gooseneck Light (USB, Red/White Light) 16.71

The Auray LED6-USB is a USB-powered 6-LED gooseneck light designed for DJs, producers, and engineers in homes, studios, and a variety of live stage applications. The flexible 10.5" gooseneck allows versatile positioning for optimal angling and orientation. Adjust the brightness via the three-step control for illumination levels appropriate to the amount of ambient light. Switch the LEDs from white to red if your environment demands discreet and shadow-free lighting. Being long-lasting, cool-running, and efficient, the LEDs are designed to keep your gear visible for years to come. With a USB Type-A connector for wide-ranging device compatibility, the LED6-USB is powered via standard USB port on your computer, mixer, keyboard, or portable PA system. USB Powered Simply connect the LED6-USB to an available USB port to obtain immediate illumination. With a USB Type-A plug, it is compatible with standard powered USB ports on computers, DJ mixers, keyboards, and more. Brightness-Adjustable White Light The three-step brightness control allows ideal lighting to suit your surroundings. Opt for a low glow or switch to a bright beam, whatever suits your workstation. Selectable Red Light Utilize the red-light option to eliminate distracting shadows and conspicuous light in notably dark environments. Low-Heat, Long-Life LEDs The six LEDs boast device-friendly efficiency, effectively avoiding power overload. By emitting minimal heat even throughout extended periods of use, the LEDs can be placed close to equipment without compromising safety. Length: 10.5" /

26.7 cm Bulb: 6-LED lamp Connector: USB Type-A Power Requirements: USB
